**Instrument Details:**

This organ has not been used for several years. After plugging it in and turning it on, I found that it was necessary to let it “warm-up” before it could produce any satisfactory sound.

After a bit of time I found that the keyboards, though quite dusty, were functional (no dead notes) as was the pedalboard (AGO standard, concave, radiating).

The combination action is functional (capture system) as are the swell pedals and the crescendo pedal.

The organ has internal speakers and two external speaker cabinets. One of the speaker cabinets was connected, the second cabinet was disconnected.

The music rack needs to be reattached, but the mounting brace is present on the top of the console. This organ is not equipped with MIDI.
